Abstract

Space: the final frontier. These are the voyages of the starship *Enterprise*. Its continuing mission: to explore strange new worlds. To seek out new life and new civilizations. To boldly go where no one has gone before!

Keywords—surgery, espionage, brains

On the Surgical Removal of
Cardassian Cranial Implants:
A case study of a Cardassian patient

We're acquainted with the wormhole phenomenon, but this… Is a remarkable piece of bio-electronic engineering by which I see much of the EM spectrum ranging from heat and infrared through radio waves, et cetera, and forgive me if I've said and listened to this a thousand times (Lovelace 1842). This planet's interior heat provides an abundance of geothermal energy. We need to neutralize the homing signal.

Main section

It indicates a synchronic distortion in the areas emanating triolic waves. The cerebellum, the cerebral cortex, the brain stem, the entire nervous system has been depleted of electrochemical energy (Turing 1936).

```
n_lights <- 2 + 2

Any device like that would produce high levels of triolic waves. These walls have undergone some kind of selective molecular polarization. I haven't determined if our phaser energy can generate a stable field. We could alter the photons with phase discriminators.

$$y = \text{Something} + \beta_1 x_1$$

Subsection

Communication is not possible (Keynes 1937). The shuttle has no power (see Figure 1).

Using the gravitational pull of a star to slingshot back in time? We are going to Starbase Montgomery for Engineering consultations prompted by minor read-out anomalies. Probes have recorded unusual levels of geological activity in all five planetary systems.

Assemble a team. Look at records of the Drema quadrant. Would these scans detect artificial transmissions as well as natural signals?
